

## U74CBT2G125

CMOS IC

### DUAL BUS SWITCH WITH LEVEL SHIFT

#### DESCRIPTION

The **U74CBT2G125** is a low on-resistance, high-speed CMOS 2-bit bus switch. This bus switch allows the connections or disconnections to be made with minimal propagation delay while maintaining Low power dissipation which is the feature of CMOS.

When output enable ( $\overline{OE}$ ) is at low level, the switch is on; when at high level, the switch is off.

The device is enable to realize the shift of signal level from 5V to 3.3V. All inputs are equipped with protector circuits to protect the device from static discharge.

#### FEATURES

- \* Operating voltage:  $V_{CC}=4.0\sim 5.5V$
- \* High speed operation:  $t_{PD}=0.32\text{ ns (max)}$
- \* Ultra-low on resistance:  $R_{ON}=5\Omega\text{ (typ.)}$
- \* TTL level input (control input)
- \* Low Power Dissipation:  $I_{CC}=10\mu A\text{ (max.)}$

Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged.

Absolute maximum ratings are stress ratings only and functional device operation is not implied.

2. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

3. The package thermal impedance is calculated in accordance with JEDEC 51.
